

All the Dirt on Extreme Performance™

AquaChek
POLYMER TECHNOLOGY
AIR DRYING FILTER

Stop rust and corrosion in your air tools and equipment with AquaChek's revolutionary polymer filtration technology.

The Right Filter for Any Need. One Filter Design to Meet A Wide Range of Needs. AquaChek Air Drying Technology provides a wide range of filters for compressed air applications. The AquaChek Protection Kit, when installed at the point of air use, will eliminate water problems for up to 180 days or until it becomes saturated.

Give your valuable air tools the protection they deserve with AquaChek products.

Note: Installing a water trap before the AquaChek Air Drying Filter is recommended. A water trap will capture a good amount of free water passing through the line before the filter and extend its life and performance.

The Heavy Duty Filter People!
